

Narrabri Gas Project CCC Information Request Response

Reference:	19.3
Request:	What is the cause of the slump at the Tintfield Pond
Response:	<p>In early September 2016, Santos reported to EPA that repair work would be undertaken when weather permitted to a part of the pond wall at Tintfield Pond 2 at our Wilga Park property.</p> <p>Minor erosion was identified in one corner of the pond as a result of recent rain. The pond was not in use and empty at the time (other than a small amount of rain water).</p> <p>Repairs to the anchor trench were carried out in early October and there was no effect on the integrity of the pond liner.</p> <p>EPA were informed throughout the process.</p>
